--------------------	------------------------------

Recommendation on paper

From the evidence, is limited capability for work and work-related activity (LCWRA), limited capability for work (LCW) or accept ongoing LCW more likely?

Treat as LCWRA

Treat as LCWRA

Why should the claimant be treated as having LCWRA?

There is substantial risk to the claimant's or another person's mental or physical health if the claimant engages in work or work-related activity

Reasons to treat claimant as having LCWRA

Multiple specialist letters confirms schizoaffective disorder, unstable emotional personality disorder, ADHD, Gender identity disorder, anxiety and depression with psychotic episodes. Evidence shows multiple anti depressants and high dose anti psychotic medication however continues to have pseudohallucination, dissociations and suicidal thoughts . Multiple specialist letters shows unstable emotional and mental health with multiple attempts of suicide, GP printout dates 4 overdoses in the last 12 months, last attempt 12/12//2023, he has had previous mental health admissions early 2023, known to home treatment team, disengaged with services, he attempted to start university however has subsequently left. The uc50 shows ongoing thoughts of suicide. He is also awaiting assessment for ASD. The uc50 indicates variability in function however mental state is very fragile. The overall evidence shows Substantial risk of further mental health deterioration is highly likely with any additional stress or work or work related tasks.

LCWRA review period

When should this claim be reviewed?

In the longer term

Why do you recommend this review period?

Multiple specialist confirm multiple complex mental health conditions, fragile mental state, on significant medication with high level of specialist input and multiple attempts of suicide. Due complex nature of his mental state . Improvement is unlikely within the longest term.
